

GITHUB PAGES DEPLOYMENT REPORT

Muhammad Maaz Kamal Portfolio Website

Deployment verified live on GitHub Pages.

Prepared on 2026-06-14 03:38:23 +05:00 for Muhammad Maaz Kamal.

Deployment Summary

Live website	https://maazkamal08.github.io/
GitHub repository	https://github.com/MaazKamal08/MaazKamal08.github.io
Branch	main
Commit deployed	7202e97924ad117db9d4b0ff088ba7c3f65b8547
Commit message	Enhance portfolio experience and role positioning
Deployment method	GitHub Actions workflow: Deploy Portfolio to GitHub Pages
Static build directory	./out
Production base path	/

Verification Results

- Production build completed successfully using GitHub Pages environment variables.
- Live URL returned HTTP 200.
- Live page contains the new service operating system section.
- Live page contains the updated role sequence: Full Stack AI Engineer, Senior Information Security Analyst, AI/Automation Engineer, Cybersecurity Engineer.
- Local responsive checks passed for desktop and mobile widths with no horizontal overflow.
- Browser console check returned no JavaScript errors during local verification.
- TypeScript validation passed with `npm run typecheck`.

Portfolio Improvements Included

Advanced Visual Experience

Added scroll progress, active section navigation, smart HUD, hover elevation, card glow effects, and button sheen interactions.

Balanced AI + Security Positioning

Portfolio now presents AI engineering, cybersecurity, automation, and leadership as equal pillars instead of one dominant track.

Service Operating System

Added service tracks for Full Stack AI Engineering, Security Automation & SOC AI, Client Automation Systems, and AI + SOC Leadership.

Role Ticker Refinement

Updated hero role sequence and fixed animation behavior so long titles render cleanly without leftover characters or empty slots.

Final Hero Role Sequence

1. Full Stack AI Engineer
2. Senior Information Security Analyst
3. AI/Automation Engineer
4. Cybersecurity Engineer

Service Tracks Added

Full Stack AI Engineering

Production AI applications, RAG platforms, agent workflows, internal tools, APIs, and dashboards.

OpenAI LangGraph LangSmith Pydantic FastAPI Next.js

Security Automation & SOC AI

SOC triage, phishing intelligence, firewall response, SOAR, EDR/XDR enrichment, and alert workflows.

Wazuh EDR/XDR n8n VirusTotal pfSense MITRE ATT&CK

Client Automation Systems

Business automation for marketing, CRM, SEO, lead routing, WhatsApp, reporting, and operations teams.

GoHighLevel

Make.com

Zapier

WooCommerce

Google Sheets

n8n

AI + SOC Leadership

Technical leadership across AI engineering teams and SOC operations, turning complex delivery into accountable outcomes.

Delivery Standards

Code Review

SOC Playbooks

Compliance

Client Success

Files Changed In Deployment

File	Purpose
src/data/portfolio.ts	Added service-track data, operating signals, and updated the hero role sequence.
src/components/PortfolioExperience.tsx	Rendered service section, scroll progress, active navigation, smart HUD, and long-title role class.
src/app/globals.css	Added advanced animation, responsive service layout, ticker fixes, hover effects, and HUD styling.

Build And Deployment Commands

TypeScript check	npm run typecheck
Production build	GITHUB_PAGES=true npm run build
Commit	git commit -m "Enhance portfolio experience and role positioning"
Push	git push origin main

Deployment Notes

- The website is configured as a static Next.js export with `output: "export"`.
- GitHub Pages asset paths are served from the root user-site URL with `GITHUB_PAGES=true` and no repository base path.
- The workflow installs dependencies with `npm ci --legacy-peer-deps`, builds the static export, uploads `./out`, and deploys through `actions/deploy-pages@v4`.
- The live deployment was verified after push by checking the public GitHub Pages URL for the new content.

Current Status

The updated portfolio is deployed and publicly accessible.
